Questions:	Answers:
<p>1. Given the universal set</p> $U = \{a, b, c, d, e, f, 1, 2, 3, 4, 5, 6, 7, 8, 9\}$ <p>let <math>A = \{a, b\}</math>, <math>B = \{a, c, 2, 4, 6\}</math>,  <math>C = \{1, 2, 3, 4\}</math> and <math>D = \emptyset</math>.</p> <p>Evaluate each expression:</p> <p>a) <math> D </math></p> <p>b) <math>D \in A</math></p> <p>c) <math>\bar{B}</math></p> <p>d) <math>A \cap B</math></p> <p>e) <math>(U - B) \cup C</math></p> <p>f) <math>C \subseteq B</math></p>	<p>a) <math> D  = 0</math></p> <p>b) <math>D \in A = \text{false}</math></p> <p>c) <math>\bar{B} = \{d, e, f, 1, 3, 5, 7, 8, 9\}</math></p> <p>d) <math>A \cap B = \{a\}</math></p> <p>e) <math>(U - B) \cup C = \{d, e, f, 1, 2, 3, 4, 5, 7, 8, 9\}</math></p> <p>f) <math>C \subseteq B = \text{true}</math></p>
<p>2. Prove: <math>A \cap A = A</math></p> <p>Use the definition of <math>\cap</math>. Justify each step in your proof.</p> <p>(Hint: convert left side to right side.)</p>	

<p>6. Using set laws, reduce:</p> $((A \cup B) \cap (U \cup \sim B)) \cup (\sim B \cup (B \cap \sim C) \cup C)$ <p>to <math>U</math> (the universe of all elements).</p> <p>Justify each transformation with one or more laws.</p>	
<p>7. Given the universal set:</p> $U = \{a, b, c, d, e, f, 1, 2, 3, 4, 5, 6, 7, 8, 9\}$ <p>let <math>A = \{a, b\}</math>, <math>B = \{a, c, 2, 4, 6\}</math>,  <math>C = \{1, 2, 3, 4\}</math> and <math>D = \emptyset</math>.</p> <p>Evaluate each expression:</p> <p>a) <math>A \cdot B</math></p> <p>b) the relation on <math>A \cdot C</math> in which the second element of the ordered pairs is larger than 3.</p>	<p>a) <math>A \times B = \{(a, a), (a, c), (a, 2), (a, 4), (a, 6), (b, a), (b, c), (b, 2), (b, 4), (b, 6)\}</math>  b) <math>\{(a, 4), (b, 4)\}</math>  c) 40  d) <math>C \times D</math> is a subset of <math>A \times B</math></p>

<p>c) <math> A \cdot B \cdot C </math></p> <p>d) <math>C \cdot D \subseteq A \cdot B</math></p>
